Key for Symbols

Used in Input/Output Control Commands

- Shaded areas are reserved. (The hexadecimal values were developed assuming all reserved modifiers to be zero.)
- X - Address word (not shown) contains the address of the first core storage location used by the command.
- * - Sector count can be any binary value 000-111 (hexadecimal 0-7).
- # - Address word (not shown) contains the number of cylinders of movement.
- & - Address word (not shown) contains the write (skip) command modifier.

Control Leader (CL)	0	1	0	1	0	1	0	55	
End of Transmission (EOT)*	0	1	0	1	1	0	1	5A	
Inquiry or Error (INQ or ERR)	0	1	0	1	1	0	1	59

Group Mark	1	0	0	0	1	1	0	8D	
Longitudinal Redundancy Check (LRC)**	-	-	-	-	-	-	-	--	

* Also used as a data character

** This character has a 0 bit in each bit position that contained an even number of 1 bits for that bit position in the data record. If that bit position in the record had an odd number of 1 bits the LRC character ranges from all 0s to all 1s and thus, is not in the 4 of 8 code.

To find the decimal equivalent of a hexadecimal number, locate the hexadecimal number and its decimal equivalent for each hexadecimal position (four bits). Add the four decimal equivalents to obtain the decimal number. For example, the decimal equivalent of hexadecimal number FCCE is 64,718 (61,440 + 3,072 + 192 + 14).

To find the hexadecimal equivalent of a decimal number, locate the next lower decimal number in the chart. The corresponding hexadecimal digit is the first significant hexadecimal digit (any higher order hexadecimal digits are zero). Subtract the first decimal number used (in the chart) from the original decimal number. Use the difference obtained to determine the next hexadecimal digit. Subtract the second decimal number used (in the chart) from the first difference. Use the second difference to determine the next hexadecimal digit. Repeat this procedure until the complete hexadecimal number is determined. For example, the hexadecimal equivalent of decimal number 2,914 is 0B62 (high order = 0; 2,816 = B; 96 = 6; 2 = 2).

The maximum value shown on the chart is 65,535 (hexadecimal FFFF).
